Job Title: PYTHON/DJANGO DEVELOPER

Location: GDANSK/POLAND

Job Description:

We are currently looking for an experienced Software Engineer to develop and improve an online database platform. We are working on two ongoing projects of which one is related to the automotive industry. Both projects have reached a maturity level which allows us to introduce it to the customers but some important functionality is still to be developed. This job is based in Gdansk/Poland but may require occasional trips to the UK. We are also looking for 1-2 Junior engineers to join the team so if you feel like your skills are not quite adequate at the moment please apply for a Junior Engineer role instead.

Typical Tasks:

- Developing database software
- Creating and running unit and functional tests
- Improving stability of existing products
- Upgrading and enhancing existing software projects
- Adding new functionality
- Creating product documentation
- Maintaining the software and resolving issues raised by users
- Providing training to junior software engineers and coordination their work

Candidates Profile:

- University Degree in Informatics, Telecommunication or Electronics (last year students will also be considered)
- experience in Python programming language
- good knowledge of Django framework
- some knowledge of AngularJS
- good knowledge of database programming (PostgreSQL and MySQL)
- experience with Unix systems
- communicative English
